

ABSTRACT OF THE DISCLOSURE

09987733 054502
205750 2228660

A used viewfinder determination section determines whether an optical viewfinder is being used or if a liquid crystal monitor is being used, based upon signals from an eye approach detection section. A blur correction operation changing section changes a blur correction operation by a blur correction lens in accordance with determination results from the used viewfinder determination section. When it is determined that the optical viewfinder is not being used, a blur correction operation using the blur correction lens is not carried out.
